This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for measuring a service data amount of a terminal in a call connection networking between a TE terminal equipment (TE) and a network comprising:

wherein an amount of data provided for service is measured and displayed on a screen

monitoring packets received or transmitted at the terminal to determine if a monitored received or transmitted packet corresponds to a control packet indicating a control protocol setup state of the TE is established;

cumulatively counting a number of all packets, excluding data added during a protocol stack setting process, received or transmitted until every protocol session of the TE is released if the control packet indicates the control protocol setup state of the TE is established; and displaying the counted number of packets on a display of the terminal.

- 2. (Canceled)
- 3. (Currently Amended) The method of claim 2, wherein the counted packets displayed on the screen of the terminal include only the data is in a payload of a transmission control protocol layer.
 - 4. (Canceled)
